Ramanujan: Essays and Surveys
Srinivasa Ramanujan Aiyangar 2001 This book contains essays on Ramanujan and his work that were written especially for this volume. It also includes important survey articles in areas influenced by Ramanujan's mathematics. Most of the articles in the book are nontechnical, but even those that are more technical contain substantial sections that will engage the general reader.

Manual of Tropical Dermatology
J. H. S. Pettit 2012-12-06 We live today in a world densely populated by human beings living in close communication with one another all over the surface of the planet. Viewed from a certain distance it has the look of a single society, a community, the swarming of an intensely social species trying to figure out ways to become successfully independent. We obvi ously need, at this stage, to begin the construction of some sort of world civilization. The final worst-case for all of us has now become the destruction, by ourselves, of our species. Although this warning is often repeated, we must not forget its paramount importance and the commitment that each sector of society has to make a world civilization possible. Tropical dermatology is a good example of an important area of our spec ialty that has never caught the proper attention of the leading centers of research in the developed countries, even though it comprehends major infec tious, parasitic, and nutritional problems of one-half of the world's land area and three-quarters of the world's population. The relevance of tropical dermatology in this extensive and overpopulated area of the globe has public health connotations that emphasize its importance. The sheer size of the problem makes it an urgent and outright need to recruit and train adequate personnel to do a proper job, and that includes not only dermatologists but paramedical personnel, nurses, and laboratory technicians.

The Chemotherapy of Protozoan Diseases
Edgar Alfred Steck 1972
Bibliography of Kuru - Daniel Carleton Gajdusek 1975 Over 1600 entries, generally to literature written between 1957-1974. Covers books, journal articles, and unpublished reports. Includes basic bibliography (arranged by authors) and supplements in related fields, i.e., social and physical anthropology, linguistics, and natural history. Author index.

Arthropods and Human Skin - John O'Donel Alexander 2012-12-06 To the entomologist all insects have six legs; the layman tends to use the term "insect" to include the eight-legged spiders and mites. All these creatures are correctly classified as arthropods. Many thousands of the hundreds of thousands of recognised species of arthropods are found in the human environment-domestic, occupational and recreational. Those species which are obligate parasites of man, the human scabies mite and the head and body lice, produce familiar clinical syndromes. They remain important in medical practice and have been the subject of a great deal of recent research. This is beginning to throw much light on the immunological mechanisms which largely determine the reactions of the host. Dr. Alexander has provided a detailed survey of this work. The wasps, bees, ants and other Hymenoptera which may sting man in self-defence can cause painful, even fatal reactions. The recent work on this important subject has also been thoroughly reviewed. Every dermatologist of experience will admit that he sees many patients in whom he makes a diagnosis of "insect bites", if he has the confidence to do so, or of "purpuric urticaria" or "prurigo" when he lacks such confidence, mainly because he is at a loss to know which arthropod is likely to be implicated. In his survey of the enormous literature in the entomological, public health and dermatology journals Dr. Alexander has provided an invaluable guide in which the solutions to these clinical mysteries can be sought.

Agents of Apocalypse - Ken De Bevoise 1995-01-03 As waves of epidemic disease swept the Philippines in the late nineteenth century, some colonial physicians began to fear that the indigenous population would be wiped out. Many Filipinos interpreted the contagions as a harbinger of the Biblical Apocalypse. Though the direct forebodings went unfulfilled, Philippine morbidity and mortality rates were the world's highest during the period 1883-1903. In Agents of Apocalypse, Ken De Bevoise shows that those "mourning years" resulted from a conjunction of demographic, economic, technological, cultural, and political processes that had been building for centuries. The story is one of unintended consequences, fraught with tragic irony. De Bevoise uses the Philippine case study to explore the extent to which humans participate in creating their epidemics. Interpreting the archival record with conceptual guidance from the health sciences, he sets tropical disease in a historical framework that views people as interacting with, rather than acting within, their total environment. The complexity of cause-effect and agency-structure relationships is thereby highlighted. Readers from fields as diverse as Spanish, American, and Philippine history, medical anthropology, colonialism, international relations, Asian studies, and ecology will benefit from De Bevoise's insights into the interdynamics of historical processes that connect humans and their diseases.

Infections of the Nervous System - David Schlossberg 2012-12-06 Dr. David Schlossberg presents his fifth volume in the series Clinical Topics in Infectious Disease, Infections of the Nervous System. This edited monograph brings together the leading authorities in infectious disease, neurology, and radiology to review the diagnosis and treatment of all major neurological infections. Topics covered include meningitis; acute TOS inflammation; infections of CNS shunts; brain and spinal epidural abscesses; the cerebellum and CNS infection; post-infection complications and syndromes; acute viral encephalitis; neurodegenerative peripheral nerve diseases; myelitis; CNS tuberculosis; cryptococcal, fungal, and parasitic infections; neurosyphilis, AIDS; Lyme disease; diagnostic imaging of CNS infection and inflammation; and evaluation of spinal fluid.

A Quick Glance at Paediatrics - Beckie Ninnena Tagho 2018-11-28 This book represents a much-needed paediatric reference book, especially with regards to developing countries. It will be of interest and use to all professional stakeholders in paediatrics and child health, including paediatricians, general practitioners, family medicine specialists, paediatric teachers and lecturers, and medical students. It covers a wide range of topics including clinical paediatrics, preventive and social paediatrics, infectious diseases, non-communicable diseases, child health, clinical history taking, systemic physical examination and clinical reasoning. It also considers interdisciplinary areas like paediatric dermatology and paediatric orthopaedics. As such, this is an invaluable book, and it brings together a wide range of experienced experts from various specialties and institutions.

Tigers, Rice, Silk, and Silt - Robert Marks 1998-02-28 Challenging the conventional wisdom conveyed by Western environmental historians about China, this book examines the correlations between economic and environmental changes in the southern Chinese provinces of Guangdong and Guangxi from 1400 to 1850, but also provides substantial background from 2CE on. Robert Marks discusses the impact of population growth on land-use patterns, the agro-ecology of the region, and deforestation; the commercialization of agriculture and its implications for ecological change; the impact of climatic change on agriculture; and the ways in which the human population responded to environmental challenges. This book is a significant contribution to both Chinese and environmental history. It is groundbreaking in its methods and in its findings.

Pharmacology for Student and Pupil Nurses and Students in Associated Professions - Bernard R. Jones 2016-06-06 Pharmacology for Student and Pupil Nurses and Students in Associated Professions is based on lectures that have been updated and presented to nurses in training for the State Registration and State Enrolment Examinations and to Students in Dispensing. This book describes therapies and drug trends in the industry, as well as many types of drugs, their administration, dosage, usage, and effects. Functions of the pertinent human anatomy are included to illustrate the absorption of these drugs. This book includes a section on patient counseling; the use of the International System of Units (SI); and the immune-response process related to
specialized fields of treatment. Patient counseling is undertaken for patients who will continue treatment at home. The nurse gives proper advice on the administration of the patient's medicine. SI was adopted to enhance the standardization of the unit of measurement for volume, weight, temperature, and length. This standard includes the use of the terms Celsius, millimole, and joule and the way of writing abbreviations and numbers in the Metric system. The immune-response process deals with the mechanism and related aspects concerning the two groups of cytotoxics, antimitotics and antimetabolites. The side effects of these drugs when used, for example, in chemotherapy, are discussed. This book will prove useful to pharmacists, student pharmacy technicians, professors of pharmacology, practitioners of general medicines, and specialists with interests in drug therapy.

**The Shadow of a Dream**
Peter A. Coclanis 1991 Coclanis here charts the economic and social rise and fall of Charleston and the surrounding South Carolina low country. Spanning 250 years, his study analyzes the interaction of both external and internal forces on the city and countryside, examining the effect of various factors on the region's economy from its colonial beginnings to its collapse in the 19th and early 20th centuries.
