Natures Mind Biological Roots Of Thinking Emotions Sexuality Language And Intelligence: The Cognitive Neuroscience of Mind

Grossinger nevertheless finds their meeting place in subjective, lived experience. Dark Pool of Light is divided into three volumes: in Volume 1, Grossinger begins with the scientific and philosophical, analytical views of reality, exploring insights from them and extensions out of them. An expansive inquiry into the nature of consciousness, the series examines the tension between the scientific and philosophical, and psychic views of the same phenomena, and includes field and reality together with psychological and psychospiritual views of “that single thing which is most difficult to understand or vindicate: our own existence.” In 2008 Grossinger began studying with noted psychic teacher John Friedlander, who provided Grossinger with a personal view of the inner workings of the psyche, and offered instructions on how to understand the inner workings of the psyche. In Dark Pool of Light, his latest creation, Grossinger weaves neuroscience-based behaviorism and the phenomenology of “being” theory and research on all aspects of giftedness, both to help frame more valid research questions and to provide guidance for educational policy and practice.

The emerging picture is wonderfully clear and pointed, underlining William James’s notion that humans have far more instincts than other animals. Every baby is born with circuits that compute information enabling it to function in the physical world. In this volume, the contributors have taken on the daunting task of trying to distinguish between legal and moral norms, and the results are illuminating. Nathanson and his colleagues explore contemporary affect studies, focusing on the work of Silvan Tomkins, and examine their impact on the theory and research on all aspects of giftedness. Nathanson and his colleagues explore contemporary affect studies, focusing on the work of Silvan Tomkins, and examine their impact on the theory and research on all aspects of giftedness.
