The U.S. Experiment In Social Medicine-Alice Sadrell 1989-11-15 This book represents the first political history of the federal government's only experiment in social medicine. Alice Sadrell examines the Neighborhood, or Community Health Center Program (NHC/CHC) from its origins in 1965 as part of Lyndon Johnson's War on Poverty campaign up until 1986. The program embodied concepts of social medicine, community development, and consumer involvement in health policy decision-making. Sadrell views the NHC experiment in the context of a series of political struggles, beginning in the 1890s, over the boundaries of public and private medicine, and demonstrates that these health centers so challenged mainstream medicine that they could only be funded as a program limited to the poor.

Digest of Social Experiments-David H. Greenberg 1997 Social experimentation is the most powerful method available to isolate the impacts of social programs. It involves the random assignment of the test groups to otherwise identical “treatment” and “control” sample groups, so that any differences that emerge at the end of the experiment can be interpreted as results of the program. It is the only social science measurement tool that resembles the methods used by the natural sciences. This volume is the most comprehensive reference work to date on all known evaluations that have used or are using social experimentation to measure the impact of a social program. The authors inventory 145 completed and 75 ongoing social experiments, giving the cost, time period, treatments tested, outcomes of interest, sample sizes and target populations, design issues, and methodological limitations.

Black Integration a Failed Social Experiment-Loray Muhammad 2014-03-18 This book is meant to generate a discussion about integration absent of the emotion. The people that were involved in the Civil Rights Movement decided that this was the best way to move Blacks as a group forward. This had never been attempted in America. There was no blue print. The nation is fifty years into the experiment, so it is time to take a cold, hard look at the outcomes of the Black community to determine if the experiment has been effective. In order to determine the effectiveness we need to examine the outcomes for the group. Progress can not be measured by the exceptions but by the rule. If a few Blacks have progressed and the majority have not, then the nation has to reevaluate this policy.

Experimental Social Programs and Analytic Methods-Alexander Basilevsky 2013-10-22 Experimental Social Programs and Analytic Methods: An Evaluation of the U.S. Income Maintenance Projects examines the statistical and econometric research on work disincentive effects reported by a series of social experiments that explore the economic and social consequences of a guaranteed income program. This book provides a comparative description of the several experimental designs and labor supply results, including a general discussion of methodological issues common to the social experiments. The Conlisk-Watts model for sample assignment and labor supply findings from both an econometric and statistical perspective are also elaborated. This text likewise presents an updated survey of the work response findings from the American negative income tax experiments. This publication is intended for professionals and students in econometrics, labor economics, statistics, and quantitative research, but is also valuable to policy analysts and others concerned with social welfare reform and public administration.

Validity and Social Experimentation-Leonard Bickman 2000-01-21 Leading social research methodologists and evaluators address the issues of validity, research design and social experimentation in this first of two volumes inspired by the work of Donald Campbell and sponsored by the American Evaluation Association. Each chapter is designed to offer readers insight into such issues as validity applied to meta-analysis, subject selection problems in randomized experiments, time-series designs and quasi-experiments, and the logic of ruling out rival hypotheses. Anyone engaged in social research will find this book a thought-provoking and inspiring read for their work.

Explanation and Experiment in Social Psychological Science-John D. Greenwood 2012-12-06 This book is about explanation and experiment in a science of human action. It aims to provide a philosophy of social psychological science that both embodies sound principles of scientific reasoning and is sensitive to the social psychological dimensions of human action. The guiding principle of this book is the belief that the logical forms of causal explanation and experimental evaluation can be effectivley employed in the scientific analysis of meaningful human action. According to most accounts, social psychological science has been in a more or less constant state of crisis for the past decades, having been subject to a host of criticisms on moral, political, methodological, and philosophical grounds. Many of these critiques have been directed against the still dominant conception of social psychological enquiry as a causal and objective scientific discipline that is closely analogous to (if not to be identified as a branch of) the natural sciences. Thus, many of the most vigorous debates have concerned the nature of explanation and the utility of experimentation in a social psychological discipline.

Observation and Experiment in the Natural and Social Sciences-Maria Carla Galavotti 2006-04-18 This volume is a contribution to the ongoing debate on the distinction between a ‘context of justification’ and a ‘context of discovery’. It is meant for researchers and advanced students in philosophy of science, and for natural and social scientists interested in
Social Psychology Through Experiment - George Humphrey 2015-06-19

Although widely taught to undergraduates, teachers, managers and adult students, practical work and demonstrations in social psychology were often found very difficult to carry out satisfactorily. Originally published in 1962, this book presented for the first time a series of experiments which would work in a classroom setting: some are modified versions of classical experiments, others were new. Several experiments are presented, together with discussion of their background and implications, in each of a number of central areas of social psychology. Each topic has been covered by a different author, who has carried out research in the area in question, and is experienced in demonstrating the main experimental facts in practical class work. The editors have written a challenging introduction, in which some of the basic issues involved in experimental work in social behaviour are raised.

Social Computing and Behavioral Modeling - Huan Liu 2009-04-05

Social computing is concerned with the study of social behavior and social c-text based on computational systems. Behavioral modeling reproduces the social behavior, and allows for experimenting, scenario planning, and deep understanding of behavior, patterns, and potential outcomes. The pervasive use of computer and Internet technologies provides an unprecedented environment of various social activities. Social computing facilitates behavioral modeling in model building, analysis, pattern mining, and prediction. Numerous interdisciplinary and inter-pendent systems are created and used to represent the various social and physical systems for investigating the interactions between groups, communities, or native states. This requires joint efforts to take advantage of the state-of-the-art research from multiple disciplines, social computing, and behavioral modeling in order to document lessons learned and develop novel theories, experiments, and methodologies in terms of social, physical, psychological, and governmental mechanisms. The goal is to enable us to experiment, create, and recreate an operational environment with a better understanding of the contributions from each individual discipline, forging joint interdisciplinary efforts. This is the second international workshop on Social Computing, Behavioral Modeling and Prediction. The submissions were from Asia, Australia, Europe, and America. Since SBP09 is a single-track workshop, we could not accept all the good submissions. The accepted papers cover a wide range of interesting topics.

Experiment Design and Statistical Methods For Behavioural and Social Research - David R. Boniface 1994-05-15

Experiment Design and Statistical Methods introduces the concepts, principles, and techniques for carrying out a practical research project either in real world settings or laboratories - relevant to studies in psychology, education, life sciences, social sciences, medicine, and occupational and management research. The text covers: repeated measures unbalanced and non-randomized experiments and surveys choice of design for confounding variables model building and partition of variance covariance multiple regression Experiment Design and Statistical Methods contains a unique extension of the Venn diagram for understanding non-orthogonal design, and it includes exercises for developing the reader’s confidence and competence. The book also examines advanced techniques for users of computer packages or data analysis, such as Minitab, SPSS, SAS, SuperANOVA, Statistica, BMPD, SYSTAT, Genstat, and GLIM.

Legal Cannabis: The Great Social Experiment - Peter M. Birkeland 2018-06-07

Colorado. Washington. Oregon. Colorado. Since 2012 nine states and DC have legalized cannabis, with more states to follow. Already a $9.7 billion dollar industry creating hundreds of thousands of new jobs, legal cannabis is not only one of the fastest growing industries, but it is changing the dynamics of American society. Through interviews and fieldwork, Peter M. Birkeland shines a sociological lens on the relevant issues of legal cannabis and investigates the most pressing issues. Who are the cannabis industry participants? What are the costs in running a marijuana business and how much money is generated? Who are the users of cannabis in this newly legal market? What are the challenges in creating a regulatory framework? What has happened to crime, teenage use, and the black market? Birkeland's book provides a documentary-like account of the emerging cannabis industry in Colorado, the first jurisdiction in the world to legalize cannabis cultivation, manufacturing, and retail sales. Birkeland worked with cannabis business owners, interviewed regulators, policy-makers (including Governor Hickenlooper), industry participants, and opponents to legalization. He attended tradeshows, symposiums, meet-ups, penetrated the black market, and visited communities that have embraced cannabis sales. Through his firsthand experience, interviews and research, Birkeland traces the evolution of the cannabis industry from strictly illegal to legal, and he documents the challenges operators, regulators, and consumers face in the quest to carry out sales of a federally legal product. Is cannabis legalization a short-lived social experiment, or is it ushering in a new era of herbal medicine and recreational use that will transform society? The author uncovers the realities of the newly legal cannabis industry in Colorado, a litmus test for other states considering legalizing cannabis.

Profiles of Social Research - Morton M. Hunt 1986-06-06 This splendid introduction to social research describes an area of scientific investigation that profoundly influences our daily lives and thoughts, but about which most of us know very little. We can picture a research chemist at work, white-coated and surrounded by beakers and test tubes—but what is the nature of social research? For interested general readers and particularly for students entering the various social science fields, Morton Hunt paints an immensely informative and accessible portrait. He begins with a lucid overview of the important varieties of social research, describing their advantages and limitations. Against this background, Hunt then details five remarkable case histories, eyewitness accounts of significant recent episodes in social research. Woven skillfully through each narrative are explorations of the basic methodological, practical, moral and political issues raised by social research. The story of a noteworthy series of sociopsychological experiments on teamwork, for example, enables Hunt to weigh the merits of using a laboratory setting to study social behavior and the ethics of deceiving human subjects. In similar fashion, Hunt depicts a historic cross-sectional survey on segregated schooling; a complex attempt to measure the impact of welfare programs; a real-world experiment with guaranteed annual income; and a path-breaking study of human aging that followed its subjects for a generation. This engaging and intelligent book will give readers a new understanding of the breadth and richness of social research as well as an informed appreciation of its significance for their lives.

Starting the Twenty-First Century - Ernest Krausz 2002-10-31 Jürgen Habermas, speaking of postmodern society, remarked that extension of the means of communication not only allows a wide range of information, but it also encourages permanent connections between different peoples, cultures, and social discourses. It thus facilitates better general understanding, a clarifying of real or apparent contradictions. But this process becomes truly positive only when it is performed between equal members. Globalization of information does not minimize the possibility of conflict or terrorism, if fundamental social problems are not resolved or at least approached in an active way. This volume examines the major upheavals of the twentieth century and views within the framework of these events and challenges implications for the future. "Values and Cultural Changes in the Postmodern World," by Zygmunt Bauman explores the changing meaning of space in the globalizing environment; S.N. Eisenstadt analyzes the destructive components of modernity; and Irving Louis Horowitz draws attention to the classical values of the common universal culture. "Social Development and Policies in Contemporary Society," by Michael M. Cernea, examines the importance of the applied and policy-orientated research, especially in the developing countries, and David Marsland stresses the positive role of sociology in pointing to the possibilities of improving healthcare in modern society. "Societies in Transition-Eastern Europe," emphasizes transitions that have occurred in Eastern Europe. Rozalina Ryvkina and Leonid Kosals provide an incisive study of the situation in Russia, while Jerry J. Wiatr presents a comparative analysis of postcommunist societies, with special reference to Poland. "The Jewish World: Pre- and Post-Holocaust," by Regina Azria, discusses the identity problems in the Diaspora confronting modernity; Eva Etzioni-Halevi considers the newly developed Israeli society from the point of view of the exercise and distribution of power; and a most interesting contribution by Annette Wiewiorka concerns the material and spiritual effects of the Holocaust on the Jews of France. Social historians and students of Judaica, as well as a general public interested in cultural pluralism will find this well-developed volume essential reading.

Marital and Sexual Lifestyles in the United States - Linda P Reuse 2013-12-16 Learn the changing role of sexuality in American life! This helpful book offers a solid background in the sociology of family life and personal sexuality. Marital and Sexual Lifestyles in the United States: Attitudes, Behaviors, and Relationships in Social Context is designed to give readers a broad view of the diversity of contemporary U. S. attitudes, behaviors, and relationships. It also covers basic sociological concepts and research methods. Most human sexuality texts focus on the individual, whereas texts designed for sociology courses on the family downplay individual sexual expression. Marital and Sexual Lifestyles in the United States integrates the two approaches. The choices of the individual take on additional meaning when seen within a unified historical, statistical, and conceptual framework. Marital and Sexual Lifestyles in the United States gives readers the tools to consider such pressing issues as: Does the divorce rate mean that the institution of marriage is in trouble? Are children's futures impaired if they come from single-parent households? Should same-sex couples be allowed to marry? How does marriage differ from cohabitation? What are the real sexual differences between the genders? What is sexual morality? How much confidence can we place in studies of human sexuality by such social scientists as Alfred Kinsey and Masters and Johnson? These questions and others like them are placed in the context of U. S. social trends, beginning with the 1950s and moving toward today. Plentifully illustrated with tables, charts, and figures that show where we are going as well as where we have been, Marital and Sexual Lifestyles in the United States gives a clear perspective on relationships in social context.

Experiencing Social Psychology - Ayala Pines 1979 Designed to supplement a Social Psychology textbook, this experienced-based handbook actively engages students in the process of discovering social psychology. The authors have organized the chapters around thirteen topics that are generally considered to be the central concerns of social psychologists. Each chapter contains an introduction to the topic, readings to expose the student to theory and research, and a research project for the student to complete. In response to the growing emphasis in social psychology on application, the 4th edition includes articles on the applications of social psychology to health, law, and work. The fourth edition has a stronger cross-cultural focus, reflecting the move in that direction within social psychology. This new edition also addresses the heated debate on the science and politics of comparing men and women.
